We'll probably comment them out if we don't have content.

The bottom left of page

<https://wcms.epa.gov/goldkingmine>

links to sampling data.

and there's a bullet with no link. THESE need to be addressed before go-live.

It depends on how much is coming LATER in the week, and exactly what functions you mean by "drill down" if not just "click on."

LONG TERM, BORAD SCALE The high-tech best is to have a dynamic system is which people put data and the back-end creates a dotted map that people can click on. Also, a live map ZOOMS to whatever scale the user wants.

SHORT TERM or SMALL SCALE ONLY I myself can manually create a map with clickable dots that either display data in a popup or link to data (like the page for that location. But it won't ZOOM and must be updated for pre-made source files such as PSD, Dreamweaver.

Thoughts on how you want to display it?

I was thinking of a map with data points one can drill into to get info on specific points

Sure, copying our national geospatial support team on this. Who are you working with in Region 8? Also copying Region 8 GIS contacts.

Do you have an idea of how you want to present the data?

Harvey and Kim,

We're getting ready to go live with the spill web site for the Gold King Mine spill. On the call with the regions, the need for a way to map out the water sample data became pretty clear.

Can we engage your team to see what's possible with accomplishing this?

::Danny
